

Guaranteed protection and security

Mobile electronic signature and ID solution for total security

What is PassByME Mobile ID?

PassByME is a mobile application that can be used for electronic signature and also for logging in users in any environment where security is of major importance. These can be: e-government, financial services, e-commerce, cloud-based services, or just a VPN connection. From technical point of view, PassByME is an easy-to-use but very secure second-factor authentication tool, in which public key infrastructure (PKI) ensures highest security while the smart device provides ease of use.

The PassByME solution complies with the PSD2 directive and suitable for ensuring strong customer authentication (SCA), transaction authorisation, signing PDFs, and also bulk signing. The authorisation that is created with the mobile device connects directly to the document: it is standard, personal, secure and interactive.

Why do you need PassByME Mobile ID?

- It provides its owner with an easy-to-use and secure mobile ID that gives protection from online fraud, because the weakest link in online security is authentication.
- Using PassByME there is no need for costly SMS messages or tokens for generating single-use passwords.
- The electronic signature function of PassByME provides a complete administration tool for you and your customers. The legally binding electronic signature created by mobile device meets all requirements of online contracts, so it makes paper-based contracting unnecessary.

Possible application areas

- Login to internet bank, transaction authorisation
- Online payment authorisation
- Online contracting with full evidentiary force
- Remote approval and document signing
- PSD2 strong customer authentication (SCA)
- Workflow management
- Bulk approvals and document signing
- Credit card payment and ATM cash withdrawal
- Internal company authentication (VPN, databases)
- Login to remote storage sites
- Using CRM and other services in connection with e-commerce

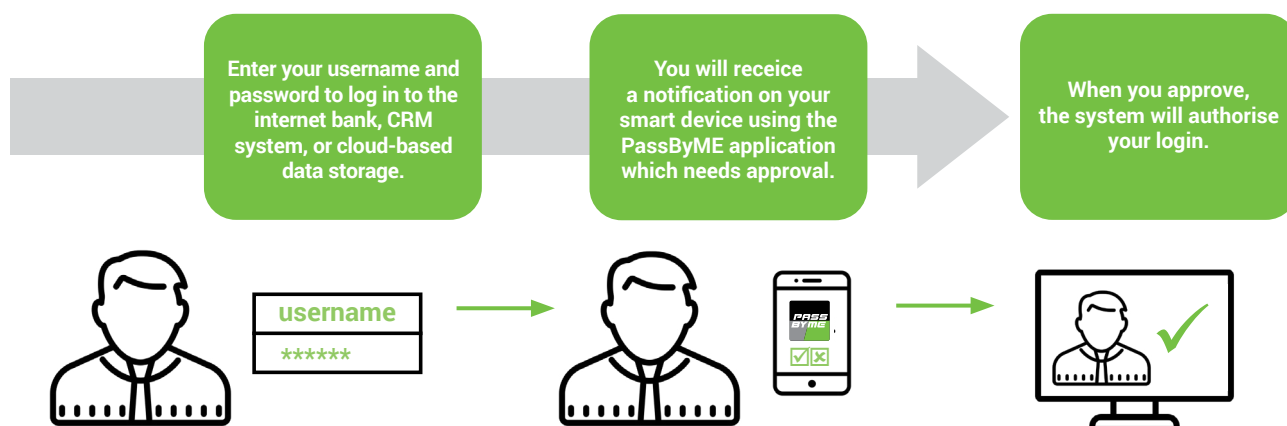

Features of PassByME Mobile ID

- Secure authentication
- Authorization
- Messaging
- Electronic signatures providing non-repudiation
- Legally binding

Main advantages of PassByME Mobile ID

- It provides the possibility of authentication anywhere and anytime.
- Easy to use, easy to integrate
- The use of international security standards, protocols, and interfaces ensures the transparency and trust in the solution which is also PSD2 compliant.
- It can be integrated as a service to the existing identification system in a matter of days.
- It uses minimal customer information and does not require any confidential customer data for operation.
